Cross-reference-only revision notice

v1.0-RC2 | 11 September 2026 | SOURCE-OF-TRUTH SYNCHRONIZATION ONLY

Control	Selected value
Revision	v1.0-RC1 -> **v1.0-RC2**
Semantic change	**NONE.** This revision changes source version/count/path references only.
Wave-2 semantic authorities	DOC-07 RC2 | DOC-08 RC2 | DOC-15 RC8 | DOC-16 RC5
Canonical HTTP companion	contracts/http/BLOG-DOC-15_openapi_v1.0-RC8.yaml
OpenAPI SHA-256	bf577a463b4c5d8fdceddc2087f53216426ef88d67d8e1a0d22ccf819751cd00
RC8 estate	113 operations | 86 paths | 221 schemas/helpers | 1,311 resolved internal refs | 0 unresolved refs 12 AUTH | 2 PUBLIC/PREVIEW | 63 SITE | 36 GLOBAL

DOCUMENT-SPECIFIC SYNCHRONIZATION

• Traceability baseline now consumes DOC-15 v1.0-RC8 and DOC-16 v1.0-RC5. Existing 50 execution-home chains, 161 capabilities and 180 QA21 IDs remain unchanged.

• HTTP trace/count gate is synchronized to 113 operations | 86 paths | 221 schemas/helpers | 1,311 resolved internal refs | 0 unresolved refs; 12 AUTH | 2 PUBLIC/PREVIEW | 63 SITE | 36 GLOBAL. FZ22-04 now checks the DOC-15 RC8 version/count lock.

• Selectable-sites trace edge: DOC-02 assignment/authorization + DOC-04 trusted context -> DOC-15 RC8 API15-AUTH-012 -> DOC-06/DOC-10 Active Website selector execution -> DOC-25 selector presentation -> existing QA21 ADM/PERM/SEC/REG families. The projection does not create a capability, permission, Page ID or new execution home.

SUPERSESSION AND HISTORICAL CLASSIFICATION

The inherited body that follows is retained unchanged in substantive page content. Any inherited non-owning reference to DOC-15 RC7/RC6, the old 112/85/217/1,297 estate, 11 AUTH operations, DOC-16 RC4, or the RC7 YAML filename is classified **HISTORICAL / SUPERSEDED REFERENCE** and is not normative in this revision. All other inherited owned semantics remain in force.

Occurrence ledger: RC7/old HTTP: inherited printed pages 1, 3, 5, 8, 10, 11, 27; RC4: inherited printed pages 1, 3, 8, 27.

IMPLEMENTATION IMPACT: NONE. The accepted NAKSHATRA_MASTER_WAVE2_HANDOFF application/database/API behavior is unchanged by this document synchronization.

BLOG-DOC-22

Master Traceability & Implementation Matrix

Canonical requirement-to-implementation-to-QA traceability and change-propagation authority for the centralized 14-site blogging platform.

14	36	161	112	180
public sites	Admin Page IDs	capabilities	API operations	QA21 IDs

TRACEABILITY RULE	A specification is not “implemented” merely because it appears in a frozen PDF. DOC-22 maps what must exist and what evidence must prove it. In the absence of implementation/test evidence, status is NOT_VERIFIED / EVIDENCE_REQUIRED, never assumed PASS.

Document control	Value
Status	REVIEW CANDIDATE - built against project-owner-designated finalized/frozen BLOG-DOC-01 through BLOG-DOC-21; freeze after DOC-22 approval
Version	1.0-RC1
Date	10 September 2026
Upstream baseline	DOC-01..14 RC1; DOC-15 RC7; DOC-16 RC4; DOC-17 RC2; DOC-18 RC2; DOC-19 RC2; DOC-20 RC1; DOC-21 RC1
Primary authority	Trace model, matrix identifiers, coverage/gap/status vocabularies, evidence linkage, change impact/propagation, release-blocking traceability
Explicit non-authority	Does not create/rename features, pages, permissions, APIs, services, DB tables, jobs, audit events, QA behavior, code structure, deployment providers or visual design.
Current implementation evidence	NOT PROVIDED in PDF-01..21 source set. Implementation and QA execution status therefore remain NOT_VERIFIED / NOT_EXECUTED until evidence is attached.

DEVELOPER LOCK	Every implementation work item must resolve to one upstream requirement and one MX22 trace chain. Every release-critical chain must end in applicable QA21 evidence. Orphans, contradictions, unverified implementations and untested release requirements are visible and release-blocking under the rules in this document.

Table of Contents / Document Map

Section	Subject
1	Purpose, authority and one-source-of-truth rules
2	Frozen upstream baseline and version register
3	Traceability object model and deterministic identifiers
4	Status model and evidence semantics
5	Canonical end-to-end trace chain
6	Requirement intake and source anchoring
7	Feature / Page / Action / State relationship rules
8	Permission and authorization linkage
9	API / semantic-service linkage
10	Database and persistence linkage
11	Worker / Cache / Search / Sitemap / Media derived linkage
12	Audit-event linkage
13	QA21 and evidence linkage
14	Implementation evidence and status governance
15	Gap detection and orphan classification
16	Change-impact categories
17	Change-propagation algorithm
18	Ownership boundaries and handoff rules
19	Release-blocking traceability gates
20	Cross-document consistency audit
21	DOC-22 acceptance criteria
22	Freeze-readiness checklist
Appendix A	50 execution-home master matrices
Appendix B	161-capability trace registry
Appendix C	Upstream release-acceptance coverage ledger
Appendix D	180 QA21 execution/evidence registry
Appendix E	Gap/status/change-control reference

ONE SOURCE OF TRUTH	DOC-22 links authoritative decisions; it does not copy ownership away from them. When a linked source changes under controlled revision, the matrix propagates impact to all downstream implementation/evidence edges without redefining the original requirement.

1. Purpose, Authority and One-Source-of-Truth Rules

BLOG-DOC-22 is the master traceability authority. Its job is to make every approved requirement navigable from authoritative specification through execution home, authorization, transport, semantic service, persistence or derived system, audit consequence and release QA. It is not an architecture redesign document and does not infer implementation completion.

- Upstream requirement meaning always remains with DOC-01 through DOC-21. DOC-22 stores references and relationship edges only.
- When one node is not applicable, the matrix records N/A with an authority reason; it does not invent a placeholder API/table/job merely to make the chain look complete.

- When an implementation artifact cannot be proven, the status is NOT_VERIFIED. “Probably implemented” and “specified therefore implemented” are prohibited states.
- When a QA result is absent, the result is NOT_EXECUTED. A design review is not test evidence.
- One upstream contradiction stops mapping for that edge and creates a BLOCKING_CONFLICT record; DOC-22 never resolves product semantics by convenience.

2. Frozen Upstream Baseline and Version Register

Authority	Baseline	DOC-22 consumption
DOC-01..14	v1.0-RC1	Product through frontend integration authorities
DOC-15	v1.0-RC7	112 HTTP operations / 85 paths / 217 schemas
DOC-16	v1.0-RC4	SEO/Search/Sitemap/Canonical/Redirect
DOC-17	v1.0-RC2	Media/storage/image/CDN
DOC-18	v1.0-RC2	Workers/queues/Redis/cache
DOC-19	v1.0-RC2	Security/auth/session/audit/privacy
DOC-20	v1.0-RC1	Performance/scale/backup/DR/observability
DOC-21	v1.0-RC1	180 deterministic release QA IDs

VERSION GATE	A later RC or frozen revision supersedes the baseline only through explicit project change control. An implementation branch may not silently use a different OpenAPI, schema, permission seed or QA expectation while claiming this DOC-22 matrix.

3. Traceability Object Model and Deterministic Identifiers

Prefix	Object	Locked meaning
REQ22-*	Trace requirement anchor	References an upstream requirement/acceptance ID or exact section decision; does not replace upstream ID.
MX22-*	End-to-end execution chain	One functional/public/system execution home mapped through downstream dependencies.
EV22-*	Implementation evidence record	Points to code/build/migration/config/runtime evidence. No evidence is fabricated.
GAP22-*	Gap/orphan/conflict record	Records missing link, orphan implementation/test, contradiction or evidence absence.
CHG22-*	Change-impact record	Controlled propagation of an upstream change through affected chains.
REL22-*	Typed dependency edge	Authority-to-authority or implementation dependency relation.

MX22 identifiers in this release use MX22-ADM-001..036 for the 36 operational Admin pages and MX22-PUB-001..014 for the 14 public Page IDs. Stable IDs are never recycled; if an upstream page disappears only through controlled authority revision, its old trace ID is retired rather than reused.

4. Status Model and Evidence Semantics

Status	Meaning	Rule
SPEC_MAPPED	Requirement has an authoritative source and a complete specification chain.	Does NOT claim code exists.
NOT_VERIFIED	No accepted implementation evidence is attached.	Default implementation status for this DOC-22 RC1.

Status	Meaning	Rule
VERIFIED	Implementation evidence proves the linked requirement in the identified candidate build.	Requires EV22 record + immutable build identity.
NOT_EXECUTED	Required QA21 test has no candidate execution evidence.	Default QA execution status in this DOC-22 RC1.
PASS / FAIL / BLOCKED / FLAKY	Inherited exactly from DOC-21.	Only PASS closes a release QA edge.
N/A	A chain node genuinely does not apply.	Must cite why, e.g. public read has no mutation audit event.
CONFLICT	Two authorities disagree.	Release-blocking; owning authority must be reopened.
ORPHAN	Implementation/test exists with no authoritative requirement.	Release-blocking until removed or authority established.

CURRENT STATUS	No application source repository, deployed environment, migration run, runtime trace, test run or release evidence package was provided as input to DOC-22. Therefore all implementation rows remain NOT_VERIFIED and all QA21 rows remain NOT_EXECUTED. This is evidence discipline, not a claim that implementation is absent.

5. Canonical End-to-End Trace Chain

Node	Trace requirement
1 Requirement	Upstream requirement/acceptance ID or exact authoritative section.
2 Feature	DOC-03 capability ID when one exists; otherwise public/system requirement authority.
3 Page	DOC-05/06 Page ID or SYSTEM/N/A where no page exists.
4 Action	ACT10/ACT11 family or system action; N/A for non-action structural requirements.
5 State	ST10/ST11 or frozen lifecycle/system state relevant to expected behavior.
6 Permission	Exact DOC-02 permission expression, PUBLIC/NONE, PREVIEW_AUTHORITY, or SYSTEM.
7 API	Exact DOC-15 operation ID(s) or N/A when no HTTP operation is required.
8 Service	DEP10/DEP11 semantic dependency or owning system service family; class/package names remain DOC-23.
9 Database	Exact DOC-08 canonical tables or N/A when derived-only/non-persistent.
10 Derived	DOC-18 jobs/Redis/cache, DOC-16 search/sitemap, DOC-17 CDN/media, as applicable.
11 Audit	Exact DOC-19 event code(s) for state-changing/security actions; N/A for ordinary reads unless DOC-19 says otherwise.
12 QA	DOC-21 deterministic QA21 ID/family + EV21 evidence types.

NO FAKE COMPLETENESS	A complete trace is not a row with invented values in every column. A complete trace is a row where every applicable dependency is explicit and every non-applicable node is justified.

6. Requirement Intake and Source Anchoring

- If an upstream item already has a stable ID (FC-*, AC*, QA*, DB-ACC-*, ISO-REQ-*, API15-*, JOB18-*), DOC-22 uses that ID directly and does not create a competing semantic ID.
- For an unnumbered normative rule, the trace anchor is DOC number + section/subsection + short immutable quote-free descriptor. DOC-22 may assign a local REQ22 pointer solely for matrix lookup.

- Acceptance criteria inherit their original release-blocking force. DOC-22 cannot downgrade them because another QA21 test covers multiple criteria through parameterization.
- Foundational DOC-01..03 constraints without one uniform acceptance sequence map through capability/module/page registries and QA21-REG/ISO/PERM guards; DOC-22 does not fabricate retroactive acceptance IDs.

7. Feature / Page / Action / State Relationship Rules

The 161 capability registry remains DOC-03 authority. DOC-10 already reconciles all 161 capability IDs: 159 have one or more Admin execution homes, FC-SEARCH-02 is public-only, and FC-SEARCH-06 is conditional system/public-derived behavior. DOC-22 imports that mapping without creating an extra Admin page.

- Admin trace home = one of exactly 36 DOC-06 Page IDs, with its FLW10 page flow, ACT10 action family and ST10 state family.
- Public trace home = one of exactly 14 DOC-05 Page IDs, with its FLW11 flow, ACT11 actions and ST11 states.
- A capability appearing on multiple pages remains one capability with multiple execution edges; it is not duplicated into new features.
- Conditional capabilities remain conditional and must not be reported as missing implementation when the owning site/frontend flag legitimately disables them.

8. Permission and Authorization Linkage

Authorization expressions are copied from DOC-02/DOC-10/DOC-15 semantics. A trace edge may be PUBLIC/NONE, authenticated context only, an exact SITE/GLOBAL permission composite, PREVIEW_AUTHORITY, or SYSTEM behavior. Assignment/site selection is never rewritten as a permission.

- Prerequisite permissions remain mandatory; DOC-22 never simplifies a composite by dropping *.view.
- Wrong-site objects map to non-disclosure QA regardless of whether the identifier is syntactically valid.
- GLOBAL-to-SITE drilldown creates a fresh CTX-ADMIN-SITE before site-owned data access; a GLOBAL trace cannot be used as site-content authority.
- Destructive/step-up requirements are cross-linked to DOC-19 mechanics without creating a new permission key.

9. API / Semantic-Service Linkage

DOC-15 RC7 is the sole HTTP method/path/schema/status authority. DOC-22 lists operation IDs, never invents routes. Service linkage uses DOC-10 DEP10-* and DOC-11 DEP11-* semantic dependencies because concrete class/package boundaries are intentionally later DOC-23 authority.

TRANSPORT LOCK	The canonical HTTP estate is 112 operations = 2 PUBLIC/PREVIEW + 11 AUTH + 63 SITE + 36 GLOBAL, across 85 route paths and 217 schemas/helpers. Any implementation evidence that exposes a materially different contract is a GAP22-CONTRACT item.

10. Database and Persistence Linkage

Database mapping uses only the 33 DOC-08 tables. A trace must not introduce a jobs/outbox/cache/search table merely because a derived subsystem needs operational state. Site-owned tables retain FORCE-RLS behavior and same-site integrity.

- Every site-owned persistence edge is evaluated under trusted SiteContext plus RLS defense in depth.
- For a derived-only artifact such as a search index generation, the canonical source DB rows are listed while the derived store is recorded in the Derived node, not misrepresented as PostgreSQL authority.
- Audit persistence always resolves to DB-TBL-032 audit_events; event semantics remain DOC-19.

11. Worker / Cache / Search / Sitemap / Media Derived Linkage

Derived-state linkage is explicit but does not move authority: DOC-16 owns SEO/search/sitemap/redirect computation; DOC-17 owns media/object/CDN; DOC-18 owns job/Redis/cache execution. PostgreSQL remains canonical for product data.

- Search refresh rows identify JOB18-SEARCH-SYNC-POST or JOB18-SEARCH-REFRESH-ENTITY only where the authoritative mutation can change public search projection.
- Scheduled publishing maps to JOB18-PUBLISH-DUE and schedule reconciliation without creating a new persisted Post state.
- Media upload/replace maps to JOB18-MEDIA-VARIANTS and current-generation fencing; private originals never become public fallback.
- Broad cache invalidation maps through DOC-18 typed dependency/epoch semantics, not raw Redis keys in application APIs.
- Sitemap changes map to site-local generation/coalescing under DOC-16/18 and never produce a network-wide mixed sitemap.

12. Audit-Event Linkage

State-changing Admin/security actions use the stable DOC-19 event_code dictionary. Ordinary reads are N/A unless DOC-19 explicitly defines a security event. Traceability never treats audit visibility as authorization to the underlying target.

- Examples: Post publish -> POST.PUBLISHED; Media replace -> MEDIA.REPLACED; Tag merge -> TAG.MERGED; Site domain change -> SITE.DOMAIN_CHANGED; Role update -> ROLE.UPDATED; authentication -> AUTH.* events.
- Audit evidence uses EV21-AUDIT and must obey DOC-19 minimization/secret rules.

13. QA21 and Evidence Linkage

DOC-21 owns executable release verification. DOC-22 maps specification and implementation evidence to those tests but does not redefine steps or expected results. Every applicable QA21 child parameter instance must PASS before release.

- Isolation matrices preserve 14 x 13 = 182 directed foreign-site pairs wherever a wrong-site resource can be supplied.
- Evidence types remain EV21-HTTP, DB, UI, A11Y, QUEUE, REDIS, SEARCH, SITEMAP, MEDIA, AUDIT, METRIC, TRACE, BACKUP, RESTORE and DEFECT.
- A QA21 PASS without required evidence is not release evidence. A BLOCKED or unresolved FLAKY result is not PASS.

14. Implementation Evidence and Status Governance

Evidence class	Minimum identity	Use
EV22-CODE	Repository path + immutable commit/build ID + symbol/module reference	Shows logic exists at candidate revision.
EV22-CONTRACT	Generated OpenAPI/schema/migration/config hash	Shows executable contract equals frozen source.
EV22-RUNTIME	Sanitized runtime trace/request/SQL/queue/cache evidence	Shows behavior in candidate environment.
EV22-TEST	QA21 result + required EV21 artifacts	Shows executable acceptance result.
EV22-DEPLOY	Environment/deployment artifact identity	Shows tested candidate equals deployable candidate.

A chain becomes implementation VERIFIED only when the implementation evidence references the same candidate build that produced the linked QA evidence. Evidence from a different commit/environment cannot close the row without an explicit equivalence record.

15. Gap Detection and Orphan Classification

Class	Definition	Required disposition
GAP22-SPEC	Required upstream node cannot be found or is internally contradictory.	BLOCK release; reopen owning source.
GAP22-IMPL	Specified requirement has no accepted implementation evidence.	Implementation NOT_VERIFIED; release cannot claim completion.

Class	Definition	Required disposition
GAP22-QA	Specified/implemented requirement has no applicable QA21 coverage or required test is not executable.	BLOCK release; update DOC-21 only if coverage truly missing.
GAP22-ORPHAN-IMPL	Code/API/table/job/permission behavior exists with no authority.	BLOCK; remove or obtain controlled upstream approval.
GAP22-ORPHAN-QA	Test asserts behavior with no authoritative requirement.	BLOCK test as invalid until source is established.
GAP22-DRIFT	Implementation artifact differs from frozen schema/count/enum/status/permission/route.	BLOCK release; correct drift or controlled revision.
GAP22-EVID	Claimed implementation/test lacks required immutable evidence.	Treat as NOT_VERIFIED/NOT_EXECUTED.

16. Change-Impact Categories

Impact	Change type	Propagation principle
CHG22-A	Semantic/product authority change	Feature/page/state/permission/product behavior changes; highest propagation scope.
CHG22-B	Persistence/route/data-contract change	Schema, RLS, routes, PageData fields; impacts transport/services/tests.
CHG22-C	HTTP/security/derived contract change	API, security mechanics, SEO/media/jobs; impacts clients/runtime/QA.
CHG22-D	Performance/operational threshold change	SLO/RPO/RTO/alerts; impacts load/DR QA and deployment sizing.
CHG22-E	QA-only clarification	May improve fixture/evidence mechanics but cannot change expected product behavior.
CHG22-F	Implementation-only change	No spec change; rerun dependency-neighbor QA and update evidence.

17. Change-Propagation Algorithm

Step	Locked action
1 Detect	Identify changed upstream ID/section and owning document.
2 Classify	Assign CHG22 category and determine whether semantic authority changed.
3 Expand graph	Traverse all MX22 rows containing the changed node plus dependent API/service/DB/derived/audit/QA edges.
4 Invalidate evidence	Mark implementation/test evidence STALE when its proven contract could have changed.
5 Revise authorities	Update only documents that own affected decisions; do not patch downstream around an upstream change.
6 Regenerate matrix	Preserve stable trace IDs; update edge versions/statuses and open/close GAP22 records.
7 Retest	Run directly affected QA21 IDs, dependency neighbors and DOC-21 regression gate.
8 Release gate	Freeze only when no blocking conflict/orphan/drift remains and all applicable QA21 evidence is PASS.

18. Ownership Boundaries and Handoff Rules

DOC-22 is a graph of authority, not a superseding architecture document. Concrete repository folders/services/providers are later engineering authorities. Until those artifacts exist, the Service node intentionally stops at DEP10/DEP11 semantic responsibility and the implementation status remains NOT_VERIFIED.

- Developer handoff must include this PDF plus the authoritative upstream PDF/YAML/migration/design assets identified by PDF-00 later.
- QA handoff consumes MX22 and QA21 IDs; it must not rewrite requirement meaning inside test code.
- Operations handoff consumes DOC-18/19/20 thresholds and evidence requirements without adding hidden run-time policy that changes user-facing behavior.

19. Release-Blocking Traceability Gates

Gate	Release-blocking rule
TG22-01	Every one of 161 capabilities resolves to its frozen execution home/system behavior.
TG22-02	Exactly 36 Admin and 14 public Page IDs have MX22 execution-home chains.
TG22-03	DOC-15 contract evidence matches 112 operations / 85 paths / 217 schemas and exact frozen OpenAPI revision.
TG22-04	Every site-owned implementation edge carries trusted SiteContext and RLS/ownership expectations.
TG22-05	Every state-changing/security action that DOC-19 requires to audit maps to an event_code and audit persistence.
TG22-06	Every upstream release-acceptance baseline in Appendix C maps to applicable QA21 families.
TG22-07	All 180 QA21 IDs have an execution state and required evidence declaration.
TG22-08	No ORPHAN implementation/test/API/DB/job/permission exists.
TG22-09	No implementation row is treated as VERIFIED without EV22 evidence at the candidate build.
TG22-10	Release requires all applicable QA21 parameter instances PASS under DOC-21; NOT_EXECUTED/BLOCKED/FLAKY/FAIL cannot be waived here.

20. Cross-Document Consistency Audit

Authority	Result	DOC-22 audit outcome
DOC-01..03	PASS	14-site platform, 19 modules, 161 capabilities and no feature invention preserved.
DOC-04	PASS	Trusted context/fail-closed/site isolation remains a mandatory edge in every site-owned chain.
DOC-05/06	PASS	Exactly 14 public + 36 Admin Page IDs; no generic Pages or extra operational page introduced.
DOC-07/08	PASS	Five Post states, structured body, concurrency, 33 tables/20 RLS tables preserved.
DOC-09..14	PASS	Routing, flows, PageData, component semantics and 14 frontend boundaries referenced without ownership drift.
DOC-15 RC7	PASS	112-operation API authority consumed; no new path/status/schema created here.
DOC-16 RC4	PASS	SEO/search/sitemap/redirect computation remains derived authority.
DOC-17 RC2	PASS	Media/private-original/public-derivative/CDN rules preserved.
DOC-18 RC2	PASS	Queue/jobs/Redis/dedupe/reconciliation referenced without new job/persistence structure.
DOC-19 RC2	PASS	Security and stable audit event dictionary

Authority	Result	DOC-22 audit outcome
		preserved.
DOC-20 RC1	PASS	Performance/SLO/RPO/RTO/load/DR thresholds remain source values.
DOC-21 RC1	PASS	180 QA IDs and evidence/release semantics consumed unchanged.
Implementation evidence	OPEN - EXPECTED	No code/test/runtime evidence in the source set; implementation is NOT_VERIFIED rather than guessed.

AUDIT RESULT	No genuine contradiction or missing specification dependency was found in DOC-01 through DOC-21 for DOC-22 scope. The only open condition is implementation/test evidence availability, which is intentionally represented as NOT_VERIFIED / NOT_EXECUTED rather than misclassified as a source-document defect.

21. DOC-22 Acceptance Criteria

ID	Release assertion
AC22-001	Exactly 50 execution-home MX22 chains exist: 36 Admin + 14 public.
AC22-002	All 161 DOC-03 capabilities appear exactly once in the capability registry, with multi-home edges preserved without duplicate capability identity.
AC22-003	FC-SEARCH-02 remains public-only and FC-SEARCH-06 remains conditional system/public-derived; no Admin page is invented.
AC22-004	Every Admin MX22 chain names its DOC-10 page/flow/action/state family, permission path, DOC-15 transport family and DEP10 semantic dependency.
AC22-005	Every public MX22 chain names its DOC-11 flow/action/state family, public/PREVIEW authority, DOC-15 public transport and DEP11 dependency set.
AC22-006	No trace row creates a new permission key, API operation, DB table, job type, Page ID or lifecycle state.
AC22-007	SITE/GLOBAL/PUBLIC/PREVIEW context semantics remain fail-closed and wrong-site non-disclosure remains traceable to QA.
AC22-008	Database references use only the canonical 33 DOC-08 tables; derived systems are not misrepresented as canonical DB persistence.
AC22-009	Worker/cache/search/sitemap/media links reference existing DOC-16/17/18 authorities only.
AC22-010	Audit links use stable DOC-19 event_code values or justified N/A for non-audited reads.
AC22-011	Upstream acceptance ledger includes all DOC-04..20 release baselines exactly as inherited by DOC-21 Appendix B.
AC22-012	DOC-01..03 foundational constraints are represented without fabricated retroactive acceptance IDs.
AC22-013	All 180 QA21 IDs appear in Appendix D with evidence class and current execution status.
AC22-014	Default implementation status is NOT_VERIFIED when no candidate evidence exists.
AC22-015	Default QA execution status is NOT_EXECUTED when no result/evidence exists.
AC22-016	VERIFIED cannot be assigned from a PDF statement alone; immutable implementation evidence is mandatory.
AC22-017	PASS cannot be assigned without DOC-21-required evidence for the exact candidate build.
AC22-018	Any source contradiction produces CONFLICT and blocks release rather than being reconciled inside DOC-22.

ID	Release assertion
AC22-019	Any implementation behavior with no authoritative requirement is ORPHAN and release-blocking.
AC22-020	Any test with no authoritative source requirement is ORPHAN-QA and cannot establish release correctness.
AC22-021	Any OpenAPI/DB/permission/page/count drift is GAP22-DRIFT and blocks release.
AC22-022	Change propagation preserves upstream ownership and invalidates affected stale evidence.
AC22-023	Changing a source ID never causes reuse of a retired MX22/GAP22/CHG22 identifier.
AC22-024	DOC-22 does not define repository class names or deployment providers before DOC-23/24.
AC22-025	Capability registry permissions remain those imported from DOC-10/DOC-02 and are not weakened.
AC22-026	Category/Author SEO and Media transport reconciliations already frozen in DOC-15 revisions remain visible through the current API/service chains.
AC22-027	Authentication HTTP family is referenced from DOC-15 RC7 while mechanics remain DOC-19.
AC22-028	Scheduled publishing retains expected version/state/time fencing and its DOC-18 background trace.
AC22-029	Media replacement retains private-original/sanitized-public-baseline and current-generation fencing.
AC22-030	Public search/sitemap/canonical rules remain site-local with no all-site fetch/filter trace.
AC22-031	Cache/Redis trace uses site namespace/epoch semantics and never treats Redis DB number as tenant isolation.
AC22-032	PITR/RPO/RTO/restore evidence remains linked to DOC-20 and QA21-DR rather than invented here.
AC22-033	Performance evidence must use DOC-20 thresholds exactly; traceability cannot soften SLO values.
AC22-034	Release gate requires 100% PASS of applicable QA21 instances; percentage pass is prohibited.
AC22-035	BLOCKED or unresolved FLAKY is not PASS.
AC22-036	Wrong-site leakage, auth bypass, lost update, early/duplicate publication, secret exposure or failed restore remains stop-the-line.
AC22-037	Every EV22 evidence record identifies candidate build/revision/environment and source MX22 row.
AC22-038	Evidence privacy follows DOC-19 and DOC-21; secrets/raw credentials are not attached.
AC22-039	Change-impact analysis traverses direct and dependent edges before a revised document is frozen.
AC22-040	No downstream document may silently override an upstream authority because an implementation is inconvenient.
AC22-041	Appendix B contains all 161 capabilities and Appendix D contains all 180 QA21 IDs; counts are programmatically checked during generation.
AC22-042	Appendix A covers all 36 Admin Page IDs and all 14 public Page IDs exactly once.
AC22-043	Acceptance coverage ranges are recorded without claiming implementation or test execution.
AC22-044	Trace rows may use N/A only with a reason; blank applicable nodes are defects.
AC22-045	No source-document PASS is converted into implementation VERIFIED without evidence.

ID	Release assertion
AC22-046	DOC-22 current cross-document audit contains no unresolved specification contradiction.
AC22-047	The final PDF is renderable/readable with no clipped tables or hidden registry rows.
AC22-048	Any later baseline revision updates the version register and re-runs count/coverage audits.
AC22-049	Freeze approval is explicit; REVIEW CANDIDATE status does not self-promote to frozen.
AC22-050	Every source baseline, execution-home chain, capability row and QA21 row remains addressable by a stable deterministic identifier after PDF generation.

22. Freeze-Readiness Checklist

Check	Freeze condition
FZ22-01	50 execution-home chains present (36 Admin + 14 public).
FZ22-02	161 capability rows present and count-checked.
FZ22-03	180 QA21 IDs present and count-checked.
FZ22-04	DOC-15 RC7 count/version lock correct.
FZ22-05	DOC-16/17/18/19/20/21 latest versions referenced.
FZ22-06	No new feature/page/permission/API/DB/job/audit/QA behavior introduced.
FZ22-07	All upstream acceptance baseline ranges recorded.
FZ22-08	All implementation statuses remain evidence-based.
FZ22-09	All QA statuses remain evidence-based.
FZ22-10	No unresolved source contradiction in cross-document audit.
FZ22-11	Gap taxonomy and release dispositions defined.
FZ22-12	Change-impact categories and propagation algorithm defined.
FZ22-13	Evidence classes and privacy constraints defined.
FZ22-14	Same-site/Global/Public/Preview context linkage preserved.
FZ22-15	Audit linkage uses DOC-19 event dictionary.
FZ22-16	Performance/DR linkage preserves DOC-20 thresholds.
FZ22-17	QA release rule preserves DOC-21 100% applicable PASS requirement.
FZ22-18	PDF final render/preflight passes.
FZ22-19	Document control/version/date and page footers are consistent.
FZ22-20	Explicit project-owner freeze approval received.

Appendix A - 50 Execution-Home Master Matrices

Each row is one stable execution-home chain. “Implementation” is deliberately NOT_VERIFIED because no code/runtime evidence was supplied. Actions/states remain references to owning DOC-10/11 families rather than duplicated definitions.

Appendix B - Complete 161-Capability Trace Registry

This registry imports the DOC-10 Appendix-B reconciliation of all DOC-03 capability IDs. It does not redefine feature names, status, execution homes or authorization. API/service references are derived only from the mapped execution home(s); public/system exceptions retain their upstream treatment.

Capability	Name / Status	Execution home	Frozen authorization	Transport / semantic service	Implementation
FC-AUD-01	Audit View REQUIRED	ADM-G-AUDIT-01	audit.view	API15-G-050, G-052 / DEP10-AUDIT	NOT_VERIFIED

Appendix C - Upstream Release-Acceptance Coverage Ledger

DOC-21 already converts these upstream release baselines into executable QA21 coverage. DOC-22 preserves the source-to-QA relationship and adds implementation evidence status. Range notation preserves every original upstream ID; it does not replace those IDs with a new semantic requirement.

Authority	Release baseline	Count	Primary QA21 families	Spec status	Current evidence status
DOC-04	ISO-REQ-001..075	75	ISO / DB / WRK / SEC	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-05	ACC-001..040	40	PUB / ISO / REG	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-06	AC-001..050	50	ADM / PERM / REG	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-07	ACC-CNT-001..052	52	CONC / LIFE / PUB	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-08	DB-ACC-001..088	88	DB / ISO / DR	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-09	ACC-001..073	73	PUB / SEO / ISO	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-10	AC10-001..076 + page QA families	76 + page families	ADM / PERM / CONC / LIFE / MED / SEO	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-11	AC11-001..056 + page QA families	56 + page families	PUB / A11Y / ISO	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-12	QA12-001..074	74	A11Y / PUB	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-13	AC-001..072	72	API / PUB / SEO / MED	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED

DOC-17 RC2	QA17-001..083	83	MED / ISO / PERF / DR	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-18 RC2	QA18-001..069	69	WRK / LIFE / PERF / ISO	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED
DOC-19 RC2	QA19-001..067	67	SEC / PERM / LIFE / DR	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED

BLOG-DOC-22 | MASTER TRACEABILITY & IMPLEMENTATION MATRIX

Authority	Release baseline	Count	Primary QA21 families	Spec status	Current evidence status
DOC-20 RC1	QA20-001..072 + LT20-01..12	72 + 12 scenarios	PERF / DR / DB	SPEC_MAPPED	Implementation NOT_VERIFIED; QA execution NOT_EXECUTED

DOC-01 through DOC-03 contain foundational scope/capability constraints rather than one uniform acceptance-ID sequence. They remain covered through the 161-capability registry, MX22 execution homes, and QA21 REG/ISO/PERM guards; DOC-22 intentionally does not invent substitute acceptance numbers.

Appendix D - Complete 180-QA21 Execution / Evidence Registry

The QA definition and test steps remain DOC-21 authority. DOC-22 records whether each deterministic ID has evidence for the current candidate. No execution package was supplied, so every row is NOT_EXECUTED.

QA21 ID	Family	Required evidence class	Current result	Trace status
QA21-ISO-001	ISO	EV21-HTTP + EV21-DB/REDIS/QUEUE as applicable	NOT_EXECUTED	EVIDENCE_REQUIRED
QA21-ISO-002	ISO	EV21-HTTP + EV21-DB/REDIS/QUEUE as applicable	NOT_EXECUTED	EVIDENCE_REQUIRED
QA21-ISO-003	ISO	EV21-HTTP + EV21-DB/REDIS/QUEUE as applicable	NOT_EXECUTED	EVIDENCE_REQUIRED

BLOG-DOC-22 | MASTER TRACEABILITY & IMPLEMENTATION MATRIX

QA21 ID	Family	Required evidence class	Current result	Trace status
		requires		

COUNT CHECK	QA21 rows generated: 180. Required DOC-21 count: 180. Result: PASS

Appendix E - Gap / Status / Change-Control Reference

Observed condition	Classification	Status	Required action
Specified but no code evidence	GAP22-IMPL	NOT_VERIFIED	Do not call it unimplemented unless evidence proves absence; require EV22-CODE/RUNTIME.
Implemented but no QA evidence	GAP22-QA/EVID	VERIFIED implementation + NOT_EXECUTED QA	Release blocked until applicable QA21 PASS.
Test exists without requirement	GAP22-ORPHAN-QA	ORPHAN	Remove/disable test expectation or obtain controlled authority.
Code/API/table/job exists without requirement	GAP22-ORPHAN-IMPL	ORPHAN	Release blocked; remove scope creep or reopen owner document.
Two source PDFs disagree	GAP22-SPEC	CONFLICT	Stop; reopen authoritative owner. Never choose by convenience.
Implementation differs from OpenAPI/DB/permission/page counts	GAP22-DRIFT	CONFLICT/FAIL	Correct implementation or perform controlled source revision and propagate change.
Upstream document revised	CHG22-*	STALE dependent evidence	Traverse graph, update affected rows, retest dependency neighborhood.

FINAL IMPLEMENTATION RULE	DOC-22 RC1 proves specification traceability, not software completion. The release can be called implemented/tested only after candidate-specific EV22/EV21 artifacts update these matrices from NOT_VERIFIED / NOT_EXECUTED to VERIFIED / PASS.
